PROFILE SUMMARY

Full Stack MERN Developer specialising in scalable web applications, real-time systems, and distributed backend architecture. Experienced in building healthcare SaaS and e-commerce platforms. Hands-on exposure to Microservices, Micro Frontends, Module Federation, GraphQL, gRPC, RabbitMQ, Kubernetes, and CI/CD workflows. Passionate about clean architecture, performance optimisation, and building production-grade applications.

SKILLS

Programming: JavaScript (ES6+), TypeScript, SQL

Frontend: React.js, Next.js, Vite, Tailwind CSS, HTML5, CSS3, Micro Frontends, Module Federation

Backend: Node.js, Express.js, REST APIs, GraphQL, gRPC

Architecture: Microservices, Clean Architecture, Event-Driven Architecture, RBAC, System Design

Databases: MongoDB, Redis, MySql

Realtime & Messaging: Socket.IO, Redis Pub/Sub, BullMQ, RabbitMQ

Cloud & DevOps: Docker, Kubernetes, AWS EC2, AWS S3, CI/CD (GitHub Actions), Nginx

Testing: Jest, Mocha, Chai

AI & Tools: Google Gemini, LangChain, Pinecone Vector DB, Git, Postman, Figma

PROJECTS

IrowzCure (Healthcare SaaS Platform)

[Live Link](#) – [GitHub](#)

A patient-first healthcare SaaS platform eliminating hospital wait times through instant appointment booking, real-time lab report access, and video consultations — secured with a 4-role RBAC system.

Tech stack: React.js, TypeScript, Node.js, MongoDB, Redis, Docker, AWS S3, BullMQ, Socket.IO, ZegoCloud, Razorpay, Gemini AI, Pinecone

- Architected the entire backend following **SOLID principles** and **Clean Architecture** — making every module independently testable and easily extensible
- Scaled **Socket.IO** across multiple server instances using **Redis Pub/Sub** as the message broker, enabling truly distributed real-time communication
- Designed a **slot-free booking architecture** with **Redis distributed locking** to eliminate race conditions under high concurrency
- Built a **4-role RBAC system** (Patient, Doctor, Hospital Admin, Super Admin) with **JWT** access/refresh token rotation
- Integrated **BullMQ** for background job processing — handling email notifications, lab report delivery, and async task queues
- Added **video consultations** via ZegoCloud and **Razorpay** for payment processing
- Built an **AI-powered healthcare assistant** using Google Gemini and Pinecone Vector Database for context-aware patient queries
- Dockerised all services and deployed on **AWS EC2** with **AWS S3** storage and automated CI/CD via GitHub Actions

IrowzElite (E-Commerce Platform)

[Live Link](#) – [GitHub](#)

A full-stack e-commerce platform with complete order lifecycle management and admin workflows.

Tech stack: Node.js, Express.js, MongoDB, EJS

- Developed authentication, product management, cart, checkout, and order lifecycle management
- Implemented returns, refunds, cancellations, wallet, coupon systems, referral systems, and offer management
- Built admin dashboards for inventory management, order handling, and product workflows
- Implemented product filtering, sorting, search, authentication, and role-based access workflows

MINI PROJECTS

Microservices User Management System

[GitHub](#)

A microservices-based backend with API Gateway, Auth, User, and Reporting services using gRPC and RabbitMQ.

Tech: Node.js, gRPC, RabbitMQ, Docker, Kubernetes

- Implemented **gRPC** for inter-service communication and **RabbitMQ** for async event-driven workflows
- Dockerised all services and configured **Kubernetes** deployments using Minikube

Micro Frontend User Management Platform

[GitHub](#)

A Micro Frontend architecture using Webpack Module Federation with independently deployable frontend modules.

Tech: React.js, Module Federation, Docker, Kubernetes

- Implemented shared dependency management and runtime module loading across multiple React apps
- Dockerised frontend services and configured Kubernetes deployments; published images to Docker Hub

PROFESSIONAL EXPERIENCE

Freelance Full Stack Developer

April 2026 - May 2026

Billing Software Migration & Optimisation

- Migrated an entire **billing software codebase from JavaScript to TypeScript**, improving type safety and eliminating a class of runtime errors across the application
- Refactored the backend to follow the **Repository Pattern**, cleanly decoupling data access from business logic and making the codebase significantly more maintainable and testable
- Optimised the **frontend build configuration**, reducing bundle size and improving build times for faster production deployments

EDUCATION

Professional Training – Full Stack Development (MERN Stack) – Brototype

Apr 2025 – Jun 2026

- Built and deployed multiple production-grade applications including healthcare SaaS and e-commerce platforms
- Designed scalable backend systems using Node.js, Express.js, TypeScript with microservices and event-driven architecture
- Implemented real-time features, authentication systems, payment integrations, and third-party APIs
- Worked with Micro Frontends, Module Federation, gRPC, RabbitMQ, and Kubernetes in hands-on projects
- Strengthened skills in debugging, performance optimisation, and writing maintainable production-ready code
